COOPER Tools

The Wire-Wrap® Connection

Cooper Tools now includes wrapping bits and sleeves for virtually limitless applications.

The proper selection of bits and sleeves is vital to good wrapping. Selection charts are provided in this catalog. In addition, your Cooper Tools Wire-Wrap® distributor and Wire-Wrap® specialists are ready to advise you.

Intimate Contact of Bare Wire and Terminal Corners

During the wrapping process, the wire is pulled from the wire slot by the rotation of the bit around the terminal. The wire is drawn over the wrap radius that intersects the bit face and the wire slot, placing tension on the wire in the process. This tension causes stretch of the wire.

As the wire is wrapped under mechanical tension, the sharp corners of the terminals penetrate into the surface of the wire and an intimate and large surface of contact is established. As the turns of wire are hooked at each corner of the terminal, the mechanical tension produced by the wrapping bit remains stored in the wrapped wire and a permanent gas-tight connection is established.

After the wrapping operation, the terminal that has been twisted in the direction of wrapping will slightly untwist and some relaxation will occur in the wire material. After some hours, when the connection is stabilized, the compression between wire and terminal corners is from 50,000 psi (35 Kg/mm²) to 100,000 psi (70 Kg/mm²), depending on the wire diameter and on the wire material.

Four turns of wire, i.e. 16 contact points provide a surface of contact equivalent to the cross section of the wire.

The electrical resistance of a wire wrapped connection is in the range of 1 milli ohm, which is less than the electrical resistance of one inch of length of the wire used to establish the connection. When the connection ages solid state diffusion at the interface corners and wire will often increase the conductivity of the connection.

Hints for good Wire-Wrapped connections

Let the Wire-Wrap tools do the work. Don't press too hard because excess pressure can lead to overwrapping. Overwrap may also occur when the wrapping bit has not been selected correctly in function of wire gauge and terminal dimension.

Keeping the tool on the terminal until the wrap is complete is important. If removed too soon, spiral and open wraps may result.

Feeding wire into the slot in the bit correctly is not difficult. The stripped end of the wire should be pushed in all the way.

Wire-wrapping is a precision technique. Proper bit and sleeve selection is important. Incorrect choice can lead to problems ranging from pigtails to loose wraps.

Bit and Sleeve Selection

Required Information

(1) Wire gauge/conductor diameter. From engineering drawing, specifications, or can be measured. Refer to wire size chart.

Wire size chart

Wire Gauge	Inches	mm
18	.0403	.1020
20	.0320	.813
22	.0253	.643
23	.0226	.574
24	.0201	.511
25	.0179	.455
26	.0159	.404
27	.0142	.361
28	.0126	.320
29	.0113	.287
30	.0100	.254
31	.0089	.226
32	.0079	.201
34	.0063	.160

(2) Wire type. From wire specifications. OFHC, alloy, silver-plated, tin-plated, etc.

(3) Wrap type, standard or modified. From engineering drawing or specifications. If not specified, modified wrap is preferred method with standard wrap generally accepted for 18 through 24 gauge.

Types of Wrap

A standard bit wraps only the bare wire around the terminal. A modified bit wraps a portion of insulation around the terminal in addition to the bare wire. This greatly increases the ability of the connection to withstand vibration.

(4) Insulation diameter. From wire specifications or can be measured. Not required if using standard wrap.

(5) Terminal size. From engineering drawings, specifications, or can be measured.

(6) Terminal diagonal. Can be measured, calculated from width and length dimensions, or obtained from popular terminal sizes chart.

Popular terminal sizes

Terminal Size		Nominal Diagonal	
in.	mm	in.	mm
.020 sq.	0.51 sq.	0.027	0.69
.020 x .030	.051 x .76	0.035	0.89
.025 sq.	0.64 sq.	0.034	0.86
.022 x .036	.056 x .91	0.041	1.04
.035 sq.	0.89 sq.	0.048	1.22
.035 x .050	.089 x 1.27	0.060	1.52
.045 sq.	1.14 sq.	0.061	1.55
.031 x .062	.079 x 1.57	0.067	1.70
.030 x .080	.076 x 2.03	0.082	2.08

(7) Terminal hole depth. Should be deep enough to allow wrapping at the terminal base.

(8) Terminal spacing. Determine minimum center-to-center terminal spacing.

Minimum Terminal Spacing

Formula: $\frac{1}{2}$ terminal thickness actual wire diameter (including insulation, if modified wrap) effective radius (from bit chart) "R" minimum terminal spacing.

Solderless Wrapping Bits and Sleeves

Wire-Wrap® has always been the leader in developing and supplying bits and sleeves for every kind of application. Over 500 wrapping bits have been designed and produced. More than 100 of these are currently active. Many additional bit and sleeve designs may be supplied upon request. Your distributor will gladly advise you on special requirements.

14YB3 Series - Heavy Duty Wrapping Tools

- Heavy-duty, easy-to-operate electric wrapping tool
- Designed for production, installation, and service uses, is the top of the Wire-Wrap portable tool line
- Features a powerful motor for steady performance; high impact-resistant plastic housing
- The standard model accepts bits for wire sizes 18-32 AWG. Its free speed is 4500 RPM
- Additional models offer a backforce feature; 2300 RPM reduced speed for cut, strip, and wrap
- 42/120/220 VAC
- Planetary gear reduction drive, insulated collet and collet nut, light trigger pull, and two-wire cord

ALL TOOLS ARE DOUBLE INSULATED.

Backforce: A spring loaded device internal to all tools identified as Backforce. Normally utilized to train new operators or to eliminate excess pressure against connection on critical applications. The building turns of wire being wrapped on the terminal forces the wrapping bit rearward against a predetermined spring pressure. This assures that every connection on the panel has been wrapped at the same pressure.

XA4 Series Wrapping Tools

- Built for one or two finger operation.
- Comfortable lighter trigger pressure... less hand and wrist fatigue.
- "Operator Adjustable Indexing": eight separate positions for operator preference.
- A twist of the knurled outer ring conveniently repositions the bit & sleeve.
- Slim, lightweight, durable quality.
- Designed for service work and light production.

ALL TOOLS ARE DOUBLE INSULATED.

Please Note: With all Wire-Wrap tools, sleeves and bits need to be ordered separately.

R3 Series-Battery Powered Wrapping Tool

It has everything... except weight, bulk and a power cord! That's why our R3 tool can be used away from the bench without any of the discomforts associated with some other self powered tools.

The comfortable, slim design means far less strain and fatigue for the operator, but that's only the beginning. As the battery pack can be installed in two ways; one for wrapping, the other for unwrapping, there is no need for two separate tools-the R3 does both jobs. The R3 can make over 1100 connections with one charge, over 25% more than could be made with the previous R2 model. Also, rechargeable and standard non-rechargeable batteries may be used in an emergency, which makes the tool even more flexible. A built-in safety feature prevents the accidental recharging of non-rechargeable batteries. Several features from the popular Wire-Wrap XA3 model are also incorporated in the R3, such as:

- Operator adjustable indexing. A simple adjustment of the outer knurled ring places the indexing position of the bit to suit individual preference.
- Self aligning gearing system. Part of a totally new drive train design that will reduce part breakage and repair bills.
- Snap action switch, designed for low voltage applications, reduces previously encountered switch problems. To complete the system, a compact charger unit is included which will recharge batteries in one hour and, to reduce bench clutter, may be hung on the wall.
- Engineered for reduced electrical interference.
- Battery and charger included.
- The 990888 is EMI safe tool with a spare battery handle assembly.

Please Note: With all Wire-Wrap tools, sleeves and bits need to be ordered separately.

14YP1 Series Wrapping Tool

- Precision-quality air-powered tool weighing 13 3/4oz /390 g
- Designed for production use with little maintenance
- Available in all models for wire sizes 18-32 AWG
- Plastic housing is rugged and well balanced for maximum operator efficiency
- Equipped with a 6 ft/183 cm flexible hose and has a positive forward indexing feature
- Index is 360° adjustable. As with the 14YM1 and 14YP1 is available with nose assemblies for extra large bits and sleeves
- Air pressure has to be from 80-100 p.s.i. (5.5-7.0 bars)
- Air consumption is maximum .2 cu. ft., or 5.7 litre free air per wrap.

Note: Left hand rotation tools are typically used with stranded wire.
The connection must be soldered unless the wire has been top-coated with an outer layer of tin solder.

14YM1 Series Wrapping Tool

- Aluminum and steel construction, straight-handle, in-line design, commonly used in assembly-line operations where the wrapping area is horizontal
- Tool can be suspended from a tool balancer
- Available in a left-hand wrapping configuration upon request
- YM1 has a 360° adjustable index position
- Positive, quick-acting indexing mechanism is always in position for the next wire insertion
- Air pressure has to be from 80-100 psi (5.5-7 bars)
- Air consumption is maximum .2 cu. ft., or 5.7 litre free air per wrap

14HP1C Squeeze Series Wrapping Tools

- For telephone installers, electronic technicians, and servicemen
- Squeeze the handle and a quality solderless wrap is made with the 14HP1C manual Wire-Wrap tool
- Features strong, lightweight plastic housing
- Universal collet accommodates all wrapping bits and sleeves
- One squeeze of the handle provides ten revolutions of the wrapping bit
- This sturdy tool will withstand rough handling and require only minimum maintenance over a long service life
- Other design features include quality construction, adjustable pivot, heat treated gearing, and ball bearing mechanism
- Uses 22-32 AWG wire

Portable Manual Tools

- Pencil-type Wire-Wrap® tools are available for wrapping wire gauges 18-32 AWG
- A representative listing of tool combinations (handle, bit and sleeve) is presented in the table below
- To order, please specify the tool number (A20557-)
- For tool combinations not listed, please contact your Cooper Tools Wire-Wrap distributor or Wire-Wrap specialists.
- To make selection, use method described on page 139.

R3 Series-Battery Powered Unwrapping Tool

The comfortable, slim design means far less strain and fatigue for the operator, but that's only the beginning. As the battery pack can be installed in two ways; one for wrapping, the other for unwrapping, there is no need for two separate tools-the R3 does both jobs. The new R3 can make over 1100 connections with one charge, over 25% more than could be made with the previous R2 model. Also, rechargeable and standard non-rechargeable batteries may be used in an emergency, which makes the tool even more flexible. A built-in safety feature prevents the accidental recharging of non-rechargeable batteries. Several features in the R3:

- Operator adjustable indexing. A simple adjustment of the outer knurled ring places the indexing position of the bit to suit individual preference
- Self aligning gearing system. Part of a totally new drive train design that will reduce part breakage and repair bills
- Snap action switch, designed for low voltage applications, reduces previously encountered switch problems
- To complete the system, a compact charger unit is included which will recharge batteries in one hour and, to reduce bench clutter, may be hung on the wall
- Engineered for reduced electrical interference
- Battery and charger included

Portable Manual Strapping Tools

- Strapping Tool is a hand-held, portable unit designed specifically for interconnecting terminals by solderless wrapping with a continuous length of bare wire
 - Fast, economical, continuous bare wire strapping is accomplished by the solderless wrapping concept, the concept with proven reliability
 - The unique hand tool interconnects terminals with a bare wire conductor forming permanent, gas-tight, solderless connections
 - The handle is constructed from reinforced plastic
- Note:** Order handle, bit and sleeve separately.

Insulation Stripper

- Ideal for repair service, prototype breadboarding, hobbyist, and limited production assembly
- Stripper is available in both single and two-wire size construction
- Thermoplastic insulations are easily removed from solid conductor wire to prepare for wire wrapping or other methods of electrical termination
- To use, push the insulated wire through the ferule to the desired strip length- and a quick pull will remove the insulation
- The stripped piece of insulation is pushed out of the stripper by the next wire insertion

Cut-Strip-Wrap Bits and Sleeves

The cut-strip-wrap bit and sleeve assembly is an economical means for making solderless wrapped connections. The one-step operation results in time savings for terminating the loose ends of wire harnesses and cables when compatible combinations of wire and insulation tubes are used.

Features:

- Wire is loaded in conventional manner
- No exposed moving parts-wrapping bit rotates inside a stationary sleeve
- Bare wire-turns on terminals are constant because of fixed window cut-off design
- Close terminal spacing-only slightly larger than conventional bits and sleeves
- Highly reliable modified wrap
- Only minimal re-training of operators is necessary

Note: Terminal Hole Depth 1.00"/25.4mm

IMPORTANT NOTE: The above list of cut-strip-wrap and sleeve combination is a guide for application capacity. In this process a very close control of wire and terminals is necessary. The tension in the wrapped connection is produced by both the wrapping bit face and how tightly the insulation adheres to the conductor. Some types of insulated wire are not compatible, and each application must be examined individually.

Wire Specifications

Wire-Wrap® insulated wire is guaranteed to work with your Wire-Wrap CSW bits and sleeves. That means good wraps that meet specifications every time. The wire comes on 1000 ft./304mm spools in 24, 26 and 30 AWG sizes. Silver-plated OFHC copper conductor with Tefzel® insulation.

Tefzel® is a registered trademark of E.I. DUPONT.

Extension Adapter Assemblies

For use with 22 through 30 gauge wrapping bits: fits all tools with steel nose nuts.

Mod. No.	UPC No.	Length "/mm	Wt. oz/g	Shelf Pack
Δ 505473	952271	2/50	1.0/30	1

Extended Nose

Fits all tools with plastic nose nut. Unit includes all components necessary to extend bit and sleeve either 2 in./50mm or hard quad 4 in./100mm.

Mod. No.	UPC No.	Length "/mm	Wt. oz/g	Shelf Pack
Δ 990240	96134 1	2/150	2.0/60	1
Δ 990241	96135 8	4/100	4.0/120	1

Spring Hook

A useful aid for wire handling. Constructed of high quality surgical steel, this tool is for routing wires on dense wire-wrapped panels.

Mod. No.	UPC No.	Shelf Pack
