Active matrix 7" colour TFT modules	LTE072T-4407
<u>Product specification</u>	LTE072T-4408

---

## 1. GENERAL DESCRIPTION

The LTE072T-4408 (PAL CVBS) and the LTE072T-4407 (NTSC CVBS) are TFT (thin film transistor) active matrix LCD modules. Each module comprises:

- A silicon TFT panel
- Driver electronics with control array
- An analog RGB/CVBS interface board
- An inverter
- A built-in backlight

The 7" diagonal display active area contains 480 (RGB) x 234 pixels and has a full colour capability. It has wide viewing angle and an aspect ratio of 16:9. The module can withstand intense environments.

## 2. FEATURES

- RGB stripe configuration
- analog RGB with horizontal and vertical sync inputs
- Video composite signal for synchronisation
- CVBS input (PAL for -4408 version, NTSC for -4407 version)
- PAL/NTSC selectable input
- Left/right, up/down control signal
- 16:9 aspect ratio
- 234 line display
- High contrast TFT LCD drive
- High speed response
- High brightness
- Wide viewing angle display
- Integrated high-efficiency backlight
- Extended temperature range
- Power supply voltage 8 to 16 V
- Fast start up backlight at low temperatures
- OSD
- Antiglare polarizer
- Built in temperature sensor

## 3. APPLICATIONS

- Car navigation & information
- Car entertainment
- TV, DVD and VCR monitor
- Video games
- Automation and process-control monitor

**4. QUICK REFERENCE DATA**

PARAMETER	VALUE	UNIT
Overall dimensions (without inverter)		
Width	167.0	mm
Height	102.0	mm
Depth	11.0	mm
Screen size (diagonal)	7 176	Inch mm
Active area dimensions		
Width	153.4	mm
Height	86.3	mm
Display resolution	(480 x 3) x 234	dots
Pixel dimensions		
Horizontal	0.107 x 3	mm
Vertical	0.369	mm
Pixel configuration	RGB stripe	
Supply voltage module	8 – 16	V
Supply voltage backlight inverter	8 – 16	V
Power consumption module (nominal value)	1.3	W
Power consumption backlight inverter (nominal value)	7.2	W
Advised viewing direction	12 o'clock	
Maximum contrast ratio (peak viewing angle)	> 100	
Adjustable luminance	4 - 400	Cd/m <sup>2</sup>
Backlight lifetime	15.000	hours
Operating temperature range (see note 1)	-30 to +85	°C
Storage temperature	-40 to +90	°C
Response speed (typical at T <sub>amb</sub> +22°C)	30	ms
Mass Module (with backlight inverter)	245	g

Note 1: Operating temperature range if from -30°C T<sub>amb</sub> to +85°C T<sub>panel surface</sub>**4.1 Backlight inverter**

The backlight inverter is an integral part of the module

PARAMETER	VALUE	UNIT
Supply input voltage	8 – 16	V
Maximum input current (V <sub>inv</sub> = 12 V)	1	A
Backlight dimming ratio	1 : 100	
Minimum Backlight lifetime [see note 1]	15.000	hours

Note 1: continuous operation at T<sub>amb</sub> = 25°C

### 6. PINNING

#### 6.1 Analog interface

SYMBOL	PIN	I/O	DESCRIPTION
V/V <sub>out</sub>	1	I/O	vertical sync pulse I/O; negative going pulses for both input and output
H/H <sub>out</sub>	2	I/O	horizontal sync pulse I/O; negative going pulses for both input and output
OSD	3	I	On screen data select input; default LOW for OSD OFF
V <sub>sup</sub>	4	I	Supply voltage (+8 to 16 V)
GND	5	-	Ground
CVBS	6	I	Composite video input; module can synchronize on CVBS or CS input
GND	7	-	Ground
R	8	I	Red video input
GND	9	-	Ground
G	10	I	Green video input
T <sub>sensor</sub> /GND	11	-	Temperature sensor / AC ground
B	12	I	Blue video input
RGB/CVBS	13	I	RGB/CVBS select input; default LOW (10 kohm pull-down resistor) selects CVBS; RGB/CVBS=HIGH (+5V) selects RGB (CS is then sync input)
Colour	14	I	0 to 3.5 V colour control input (CVBS only)
Contrast	15	I	0 to 3.5 V contrast control input (CVBS only)
Brightness	16	I	0 to 3.5 V brightness control input
Tint	17	I	0 to 3.5 V Tint control input (CVBS-NTSC only)
P/N	18	I	PAL/NTSC mode select; default HIGH (10 kohm pull-up resistor) selects NTSC 60 Hz mode. For PAL mode 50 Hz versions, P/N is default LOW; see note 3
R/L	19	I	scan direction right/ left; default HIGH (10 kohm pull-up resistor) for left-to-right scanning; R/L= LOW (0 V) gives right-to-left scanning
B/T	20	I	scan direction bottom-to-top/ top-to-bottom; default HIGH (10 kohm pull up) for top-to-bottom scanning; B/T= LOW (0 V) gives bottom-to-top scanning
CS	21	I	composite sync input; positive or negative-going TTL signal
CLKC	22	I	clock select (internal sync/ external clock); see note 1
MODS	23	I	Aspect ratio control input
MODW	24	I	Aspect ratio control input
MODN	25	I	Aspect ratio control input
PIXCLK	26	I	pixel clock
PWM	27	O	backlight synchronization output; see note 2
n.c.	28	-	Not used. Do not connect.

#### Note s

- For internal clock mode CLKC input is default HIGH (10 Kohm pull up), and PIXCLK will be continuously low. With CLKC=LOW, PIXCLK is input as the external clock signal, V and H become sync inputs and P/N,MODS,MODW and MODN must be set HIGH
- PWM signal can be used to control the PWM dimming frequency directly. It can also be used to control dimming in combination with HSY. The PWM signal should be used only with standard NTSC or PAL signal inputs.
- Only select when module is not operating

## 6.2 Backlight inverter interface

Pin No.	Symbol	Description	Remarks
CN1-1	V <sub>in</sub>	Supply voltage	8.0 ~ 16.0 V
CN1-2	V <sub>in</sub>	Supply voltage	8.0 ~ 16.0 V
CN1-3	GND <sub>supply</sub>	Supply ground	
CN1-4	GND <sub>supply</sub>	Supply ground	
CN1-5	Sleep	Sleep control by digital voltage	0.0 ~ 5.0 V
CN1-6	Duty	Duty cycle dimming control by analog or PWM voltage	0.0 ~ 5.0 V
CN1-7	Ampl	Amplitude control by analog or PWM voltage	0.0 ~ 5.0 V
CN1-8	Sync	Synchronization of internal PWM	0.0 ~ 5.0 V
CN1-9	GND <sub>control</sub>	Control ground	
CN1-10	Sensor <sub>out</sub>	Sensor readout	10 kΩ NTC

LTE072T-4408

## 7. ELECTRICAL CHARACTERISTICS

### 7.1 Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134). GND = 0 volt and  $T_{amb} = 25^{\circ}\text{C}$  unless otherwise stated.

SYMBOL	DESCRIPTION	MIN.	MAX.	UNIT
$V_{sup}, V_{inv}$	power supply input voltage	0	20	V
RH	relative humidity; see note 1	-	90	%
$T_{stg}$	storage temperature; see note 1	-40	+90	$^{\circ}\text{C}$
$T_{oper}$	operation temperature; see note 2	-30	+85	$^{\circ}\text{C}$

### Notes

- No condensation is allowed under any condition.
- Operating temperature range if from  $-30^{\circ}\text{C}$   $T_{amb}$  to  $+85^{\circ}\text{C}$   $T_{panel\ surface}$ .

### 7.2 Characteristics (Recommended operating conditions)

SYMBOL	DESCRIPTION	CONDITION	MIN.	TYP.	MAX.	UNIT
<b>Power supply</b>						
$V_{sup}$	Supply voltage (pin 4)	Within 300 ms	8.0	12.0	16.0	V
$V_{sup,ripple}$	Ripple on supply voltage	Frequency > 400 Hz			0.1	V
$I_{sup}$	Supply current	8 – 16 V	90	110	250	mA
<b>Logic levels (V/Vout, H/Hout, OSD, RGB/CVBS, P/N, R/L, B/T, CS, CLKC, MODS, MODW, MODN, PIXCLK, PWM)</b>						
$V_{IH}$	High-level input voltage		3.5	5.0	5.2	V
$I_{IL}$	Low-level input voltage		0	-	0.8	V
<b>Analog inputs</b>						
$V_{RGB}(p-p)$	Analog video input voltage (peak-to-peak value)	$R_i = 75 \text{ Ohm}$	0	0.7	1.1	V
<b>External control inputs</b>						
Brightness	Brightness control		0	2.0	3.5	V
Contrast	Contrast control		0	2.8	3.5	V
Tint	Tint control		0	3.0	3.5	V
Colour	Colour control		0	2.8	3.5	V
<b>Backlight inverter</b>						
$V_{inv}$	Supply voltage	See note 1	8.0	12.0	16.0	V
$I_{inv}$	Supply current	$V_{inv} = 12.0 \text{ V}$		600		mA
Sleep	Sleep control voltage		-0.3		$V_{in}+0.3$	V
Duty	Dimming control voltage		-0.3		$V_{in}+0.3$	V
Ampl	Amplitude control voltage		-0.3		$V_{in}+0.3$	V
Sync	Synchronisation voltage		-0.3		$V_{in}+0.3$	V

Note 1 Inverter does not meet the full dimming range, lightoutput range and boost current range at supply voltages < 11V. Start-up of backlight at a supply voltage < 9 volt is not 100% guaranteed.

### 7.3 Timing

#### 7.3.1 EXTERNAL CLOCK MODE (CHANGE CLOCK CLKC = LOW)

- Module is synchronised to horizontal sync output pulses HSY and VSY
- Input clock CLK, HSY and VSY are switched to input mode
- Module is activated by CLK (CLK timing is with respect to horizontal pixel sampling clock PIXCLK)

Timing: external clock mode

SYMBOL	DESCRIPTION	MIN.	TYP.	MAX.	UNIT
$t_{W(VI)}$	Vertical sync pulse width	1H	3H	5H	
$t_{H01}$	Vertical sync hold time	1.0	-	-	$\mu s$
$t_{SU1}$	Vertical sync set-up time	1.0	-	-	$\mu s$
$t_{W(HI)}$	Horizontal sync pulse width	1.0	5.0	9.0	$\mu s$
$t_{H02}$	Horizontal sync hold time	25	-	-	ns
$t_{SU2}$	Horizontal sync set-up time	25	-	-	ns
$f_{clk}$	CLK frequency	9.0	10.0	11.0	MHz
$f_{VSY}, f_{Vin}$	VSY, $V_{in}$ frequency	50	$f_{HSY} / 312$	$f_{HSY} / 300$	Hz
$f_{HSY}, f_{Hin}$	HSY, $H_{in}$ frequency	$f_{clk} / 650$	$F_{clk} / 610$	$f_{clk} / 570$	Hz

## 7.3.2 PWM SIGNAL

(1) Typical PWM frequency, PAL: 175 Hz; NTSC: 150 Hz

Fig. 4 Output timing, PWM signal

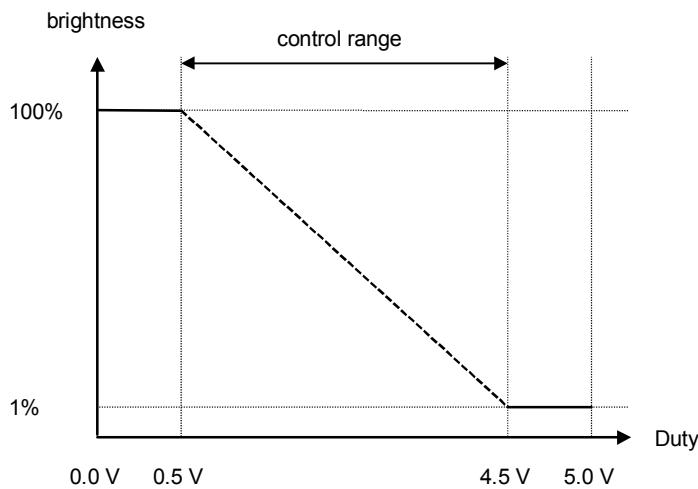

## 7.4 Inverter characteristics

### 7.4.1 DIMMING FUNCTION

Dimming can be controlled in two ways (but not simultaneously):

- By applying an analog control voltage on CN1-6.
- By applying a digital pulse width modulated control signal on CN1-6.

#### 7.4.1.1 Applying a dc control voltage

**Figure 1 - brightness as a function of a dc voltage on CN1-6**

Brightness is controlled by an analog control voltage. Below  $0.5V \pm 7\%$  and above  $4.5V \pm 7\%$  brightness control is rejected.

#### 7.4.1.2 Applying a pulse width modulated control signal

Brightness is determined by the dc-level of a pulse width modulated control signal Duty. The upper and lower voltage limits, as well as the duty cycle determine the brightness. Internally a low pass filter is applied. The control frequency should be 450 Hz or higher.

#### 7.4.1.3 Interfacing characteristics CN1-6

Item	Unit	Min	Typ	Max
absolute maximum input level	V	-0.5		21
recommended input level	V	0		5
control range lowest voltage	V	0.46	0.50	0.54
control range highest voltage	V	4.2	4.5	4.8
	kΩ	475	500	525
input impedance	pF	23	25	27
	V		1.4	
PWM control logic input level	V	0		5
PWM control slew rate	ns/V	5		500
PWM control frequency range	Hz	400		4000

#### 7.4.1.4 brightness response to duty control

Item	Unit	Min	Typ	Max

## Active matrix 7" colour TFT modules

### Product specification

LTE072T-4407

LTE072T-4408

panel brightness at no dimming	Cd/m <sup>2</sup>	350	400	
panel brightness at max dimming	Cd/m <sup>2</sup>	3.5	4	

Note:  $T_{\text{ambient}} = 25^{\circ}\text{C}$ ,  $V_{\text{ampl}} \approx 1.65\text{V}$ .

#### 7.4.2 AMPLITUDE CONTROL

Amplitude of the lamp current can be controlled in two ways (but not simultaneously):

- By applying an analog control voltage on CN1-7.
- By applying a digital pulse width modulated control signal on CN1-7.

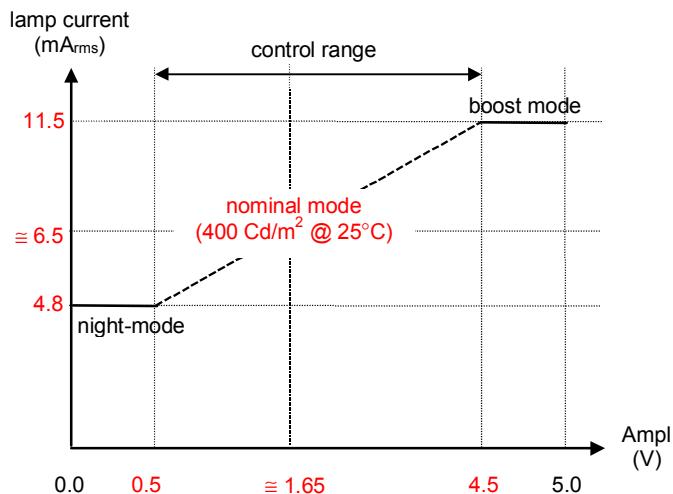

An external temperature sensor (Mitsubishi thermistor RH16-3H103FB,  $10\text{k}\Omega @ 25^{\circ}\text{C}$ ,  $B_{25-85} = 3486\text{K}$ ), connected to CN3, is used to monitor the working point of the CCFT. Control logic is not on the inverter but external. The sensor wires are lead to CN1 directly without any interfacing. Boost mode should only be used for a short period of time at low ambient temperature.

With the maximum amplitude (boost mode) and no dimming the following typical run-up times can be achieved:

Ambient temperature (still air) [°C]	Typical time to reach 200 cd/m <sup>2</sup> at the specified temperature [s]
-30	200
-20	100
-10	60

Note:  $V_{\text{in}} = 12\text{V}$ 

##### 7.4.2.1 Applying a dc control voltage

**Figure 2 - amplitude as function of a dc voltage on CN1-7**

Amplitude is controlled by an analog control voltage. Below  $0.5\text{V} \pm 7\%$  and above  $4.5\text{V} \pm 7\%$  amplitude control is rejected. Between  $0.5\text{V}$  and  $4.5\text{V}$  lamp current is almost linear with the control voltage.

##### 7.4.2.2 Applying a pulse width modulated control signal

Amplitude is determined by the dc-level of a pulse width modulated control signal Ampl. The upper and lower voltage limits, as well as the duty cycle determine the amplitude. Internally a low pass filter is applied. The control frequency should be 400 Hz or higher.

## 9. OPTICAL DATA

### 9.1 Optical characteristics

$T_{amb} = +22 \pm 3^{\circ}\text{C}$ ; supply voltage module and inverter is 12V; elapsed time from switch-on is greater than 30 minutes; RGB test patterns only; factory presets used; dimming is not applied; measurements are made perpendicular to the panel; unless otherwise specified.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
L	Luminance (note 1)	Peak white	350	400		Cd/m <sup>2</sup>
CR	Contrast Ratio	At $\alpha_{opt}$	100:1	200:1	-	
$\alpha$	Viewing angle: $\theta = 180^{\circ}$ (9 o'clock) $\theta = 0^{\circ}$ (3 o'clock) $\theta = 90^{\circ}$ (12 o'clock) $\theta = 270^{\circ}$ (6 o'clock)  $\theta = 180^{\circ}$ (9 o'clock) $\theta = 0^{\circ}$ (3 o'clock) $\theta = 90^{\circ}$ (12 o'clock) $\theta = 270^{\circ}$ (6 o'clock)	CR $\geq$ 5  CR $\geq$ 10	55 55 40 40  45 45 30 30	65 65 50 50  55 55 40 40	- - - -  - - - -	Deg Deg Deg Deg  Deg Deg Deg Deg
$t_{res}$	rise time ( $t_r$ ) [see 9.2] fall time ( $t_f$ ) [see 9.2]			45 15		ms ms
$X_R$ $Y_R$ $X_G$ $Y_G$ $X_B$ $Y_B$ $X_W$ $Y_W$	Colour coordinates:  Red Red Green Green Blue Blue White White		0.545 0.275 0.257 0.526 0.122 0.066 0.255 0.282	0.595 0.325 0.307 0.576 0.147 0.116 0.307 0.332	0.645 0.375 0.357 0.626 0.172 0.166 0.357 0.382	
$\alpha_{opt}$	Optimum contrast angle	6 o'clock	-	1	-	Deg

Note 1: Nominal lamp current (6.5 mA rms)

## 9.2 Response time

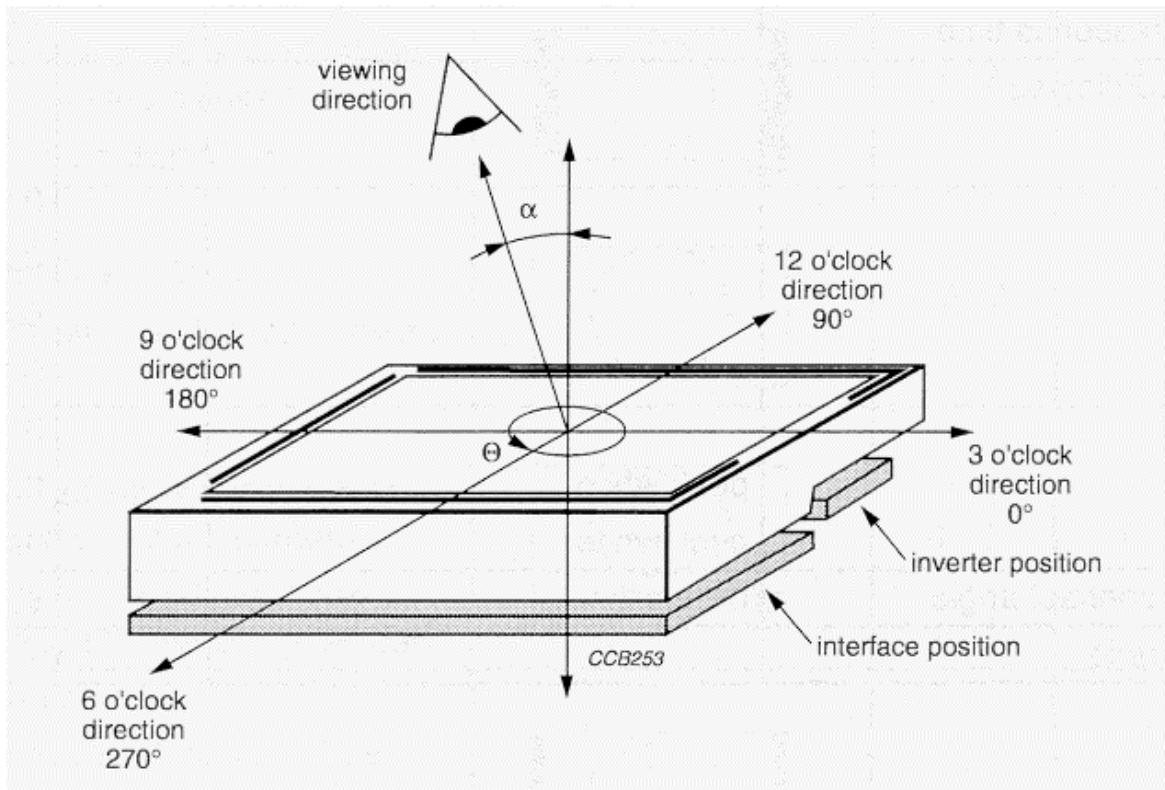

Rise time is the time for luminance to change from 10% to 90% as a result of a change of electrical condition, fall time is the time for luminance to change from 90% to 10% as a result of a change of electrical condition.

The typical rise and fall time are defined at 22°C.

## 9.3 Contrast ratio

The contrast ratio (CR) is the ratio between the transmission ( $\tau$ ) in a full white area (R=G=B=1) and the transmission ( $\tau_d$ ) in a dark area (R=G=B=0):

$$CR = \tau / \tau_d$$

$\alpha$  = declination  
 $\theta$  = azimuth

Fig. 7 Viewing angle

LTE072T-4408

## 10. ENVIRONMENTAL DATA

### 10.1 Environmental tests

TEST	CONDITIONS	METHOD	REMARK
High temperature operating test	$T_{panel} = +85^{\circ}\text{C}$ for 240 hrs	IEC 60 068-2-2Bp	panel surface temperature
Low temperature operating test	$T_{amb} = -30^{\circ}\text{C}$ for 240 hrs	IEC 60 068-2-2Ab	
High temperature storage test	$T_{amb} = +90^{\circ}\text{C}$ for 240 hrs	IEC 60 068-2-2Bp	module not operational
Low temperature storage test	$T_{amb} = -40^{\circ}\text{C}$ for 240 hrs	IEC 60 068-2-1Ab	module not operational
High temperature, high humidity operating test	$T_{amb} = +60^{\circ}\text{C}$ , RH = 90% for 240 hrs; no condensation	IEC 60 068-2-3CA	
Thermal shock	10 cycles of $T_{amb} = -30^{\circ}\text{C}$ to $T_{amb} = +85^{\circ}\text{C}$	IEC 60 068-2-14Na	module not operational
UV exposure resistance	765 W/m <sup>2</sup> for 168 hrs	IEC 60 068-2-5Sa	module not operational

### 10.2 Mechanical tests

TEST	CONDITIONS	METHOD	REMARK
Shock test	3 directions: X, Y, Z axes; 6 repeats; peak acceleration = 100 G; pulse duration = 6 ms $\frac{1}{2}$ sine wave	IEC 60 068-2-27Ea	Not operated; not packed
Vibration test	3 directions: X, Y and Z axes; 6 repeats; sweep time = 11 minutes; peak acceleration = 10 G; frequency = 10 to 150 Hz; amplitude = 1.5 mm peak-to-peak sine wave	IEC 60 068-2-6Fc	Not operated; not packed

### 10.3 Electrostatic discharge (ESD)

Under directive "89/336/EEG" conforms with "EN50082-1".

### 10.4 Electromagnetic compatibility (EMC)

Complies with "FCC part 15".

Under directive "89/336/EEG" conforms with "EN55022/B" and "EN61000-4-6".

### 10.5 Safety

Complies with "IEC 60950".

## 11. HANDLING AND SAFETY REQUIREMENTS

<b>WARNING</b>
The display glass may break when it is dropped or bumped on a hard surface. Handle with care. Should the display break, do not touch the liquid crystalline material. In case of contamination with liquid crystal material, wash immediately with water and soap.
The display module contains parts that operate at high voltage. Under no circumstances should the front or back cover or inverter shielding be removed during operation. Do not touch circuit at backside of module.

<b>CAUTION</b>
At temperatures lower than the rated storage temperature, the liquid crystal solidifies causing permanent damage to the display.
At temperatures higher than the rated storage temperature, the liquid crystal turns into an isotropic liquid and may not recover.
The display module should not be exposed to harmful gases, such as acid and alkali gases, which corrode electronics components.
Disassembling the display module can cause permanent damage and invalidates the warranty agreements.
Observe general precautions that are common to handling delicate electronic components. The glass can break and polarizers can easily be damaged. Moreover the display is sensitive to static electricity and other rough environmental conditions.

## 12. MOUNTING

<b>CAUTION</b>
Allow enough space at the back of the module for sufficient airflow to disperse heat generated by the backlighting system.
Recommended tapping (T2) screw diameter for mounting of the module is 2.2mm. Maximum torque is 1.3 kgf.cm.

## 13. DEFINITIONS

<b>Data sheet status</b>	
Objective specification	This data sheet contains target or goal specifications for product development.
Preliminary specification	This data sheet contains preliminary data; supplementary data may be published later.
Product specification	This data sheet contains final product specifications.
<b>Limiting values</b>	
Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.	
<b>Application information</b>	
Where application information is given, it is advisory and does not form part of the
